

## ADSL Broadband Availability

We are proud to announce that we are now able to take orders for broadband internet connections. Click [HERE](#) to check availability and to find out more about the different packages. We find that services such as data backup and broadband availability complement our PC and laptop repair service nicely and let us reach out to customers further afield from our Manchester base. With the internet becoming so prevalent and accessible such geographic boundaries do not limit the scope of the services we can provide. We will soon be providing some more dedicated web pages explaining the ADSL service in more detail. Until then you can test your availability and take steps to prepare for ADSL migration if you already have a broadband internet or arrange for a suitable BT connection if not.
